The condition of spring wheat has been impaired since the first of August in the northwest, the district of principal production. Heavy rains were followed by extreme heat between the first and the middle of August, just before harvest, shriveling the grain and causing rust. Heavy wind storms prostrated and injured large areas. In Nebraska there is some complaint or smut and a little in Daktots. Chinch bugs have done some damage in Wisconsin and Minnesota. The injury was greater in August than in July. The general average for all spring wheat is 86½, against 95 in August. The crop of last year was 156,000,000 tushels.

The returns of winter wheat are almost identical in results with those of July. There is a slight advance in Michigan, Texas, Maryland and some other states, and a point or two of decrease in several. The general average is 65.8, against 65 in July. Except as the result of threshing may change present expectation the winter wheat area may be placed at 217, 000,000 bushels, and the remaining area about 134,000,000. It was very doubtful it this crew would start up to a late hour. With but little chance of competing with their heavier neighbors there was an evident desire to save one of the crew, Kearney, for his single race with Smithson later in the afternoon. The Potomacs had the Virginia shore, the Columbias the center and the Washingtons the Maryland shore. It was conceded that this race would be a close one between the Washingtons and the Columbias. The recent victory of the former at Fortress Monroe gave them confidence, and bets of five to four on the Columbias were freely taken. The Columbias felt that they had the fastest four they had yet turned democrats who have been anxiously waiting for out, and thought well of their chances in both the fours and gigs.
